

Pandemic (Dis) Agreement Talks Limp into Extra Time

Kerry Cullinan

The fractious pandemic agreement talks (...) have limped into extra time, with WHO member states resolving to hold an additional Intergovernmental Negotiating Body (INB) meeting from 29 April to 10 May. The World Health Assembly (WHA) (...) is supposed to adopt the agreement, intended to be a global guide on how to prevent, prepare for, and respond to pandemics. But the best case scenario is for the WHA to adopt an "instrument of essentials", a bare-bones text that will be fleshed out over the next 12 to 24 months in advance of the proposed Conference of Parties, according to people close to the talks. The INB Bureau would get a revised text to member states by no later than 18 April. However, this text would be different from the previous one as it would aim to draw out consensus points rather than provide a shopping list of issues. The INB drafting group will focus on "agreeing text", and member states were also urged to "provide the Bureau with any convergence text resulting from informal consultations, as soon as possible". Finding consensus points may be hard in the coming days as many countries appear to have lost patience with one another, and with the INB Bureau and WHO Secretariat members who have been steering the process. Countries across the political spectrum accused one another of refusing to make compromises, and criticised the Bureau for failing to provide direction. However, the geopolitical reality is that some of the 194 member states are at war, while others are long-term trade enemies. This was never going to be easy, despite the recent trauma of COVID-19. So much text has been added to the 31-page draft (...) to a completely unwieldy 100-page draft (...) with multiple opposing clauses contained in brackets. The now notorious Article 12, which deals with pathogen access and benefit-sharing, remains the biggest obstacle. Read the complete version here.

Between March 26 and 28, civil society organizations from over 60 countries worldwide gathered to discuss strategies for influencing the G20 at the Civil Society 20 (C20), a civil society engagement group. This year's C20 is organized into ten working groups. The group dedicated to Integrated Health for Everyone (Group 5) discussed the agenda and defined topics for debate, highlighting Universal Health Coverage, Digital Health, and Mental Health. On another front, the WFPHA joined forces with other international organizations to sign a letter addressed to Dr. Tedros, encouraging the continuation of the WHO's leadership role in addressing climate change. Greenpeace emphasized significant progress in initiatives from cities in the Global South to combat plastic pollution, promoting reuse and refill systems as viable alternatives to the prevalent plastic bag economy. The OXFAM warned about the critical situation in Mozambique, following the impact of tropical storm Filipe, which further exacerbates the humanitarian crisis in the region already devastated by cyclone Freddy just a year ago, severely affecting Mozambigue and Malawi and leaving thousands of people in urgent need of assistance. Greenpeace highlighted that indigenous peoples across the Pacific are campaigning to stop deep-sea mining due to the potential to ruin precious ecosystems and the cultures that depend on them. ENDEAVOURS: GLOBAL PUBLIC HEALTH WEEK

The third edition of Global Public Health Week (GPHW) took place from **April 8 to April 12, 2024**, under the theme **"Fostering Peace as a Prerequisite for Equitable Health"**.

The WFPHA brought together institutions, communities, and public health actors from around the world to recognize the contributions of public health and its workforce. This annual event engendered discussion on the best practices and missing gaps fundamental to disease prevention and the promotion of health and wellbeing. It was a hybrid event, combining face-to-face and digital gatherings worldwide. In addition to the week's theme, each day focused on a specific theme.
